

Plastic membrane boxes

The plastic membrane box is used to protect and handle high value and vulnerable products during internal transportation, storage or sending them to your customer. The membrane box consists of two transparent PS half shells, with a PU foil mounted on each shell. Your product therefore will be comprised between those two flexible foil layers and will have an optimal protection during handling or transportation.

Characteristics of the plastic membrane boxes

- * Inspection of your product without touching it
- * Can be delivered in a cleanroom version according to ISO 14644 class 7
- * Can be sterilized by using Gamma sterilization
- * The flexible foil can resist sharp product edges
- * Available in various sizes and heights, from 39x39x18mm to 250x200x200mm or 300x150x75mm
- * Easy handling and packing of your product
- * Reusable / environment-friendly
